

## How to install Android Studio on your computer?

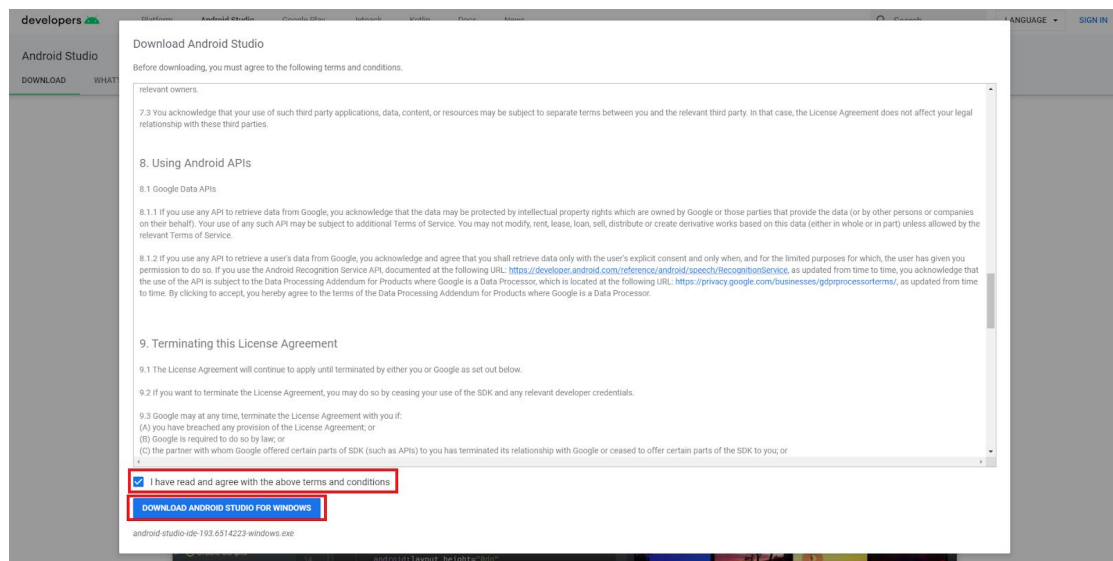

1. Download Android Studio from the following website:

<https://developer.android.com/studio>

2. Click “**DOWNLOAD ANDROID STUDIO**”.

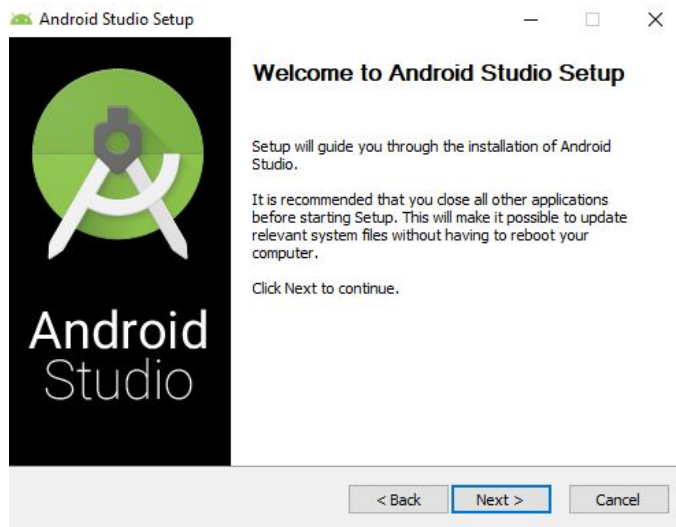

Click “**I have read and agree with the above terms and conditions**”, then click “**DOWNLOAD ANDROID STUDIO FOR WINDOWS**”.

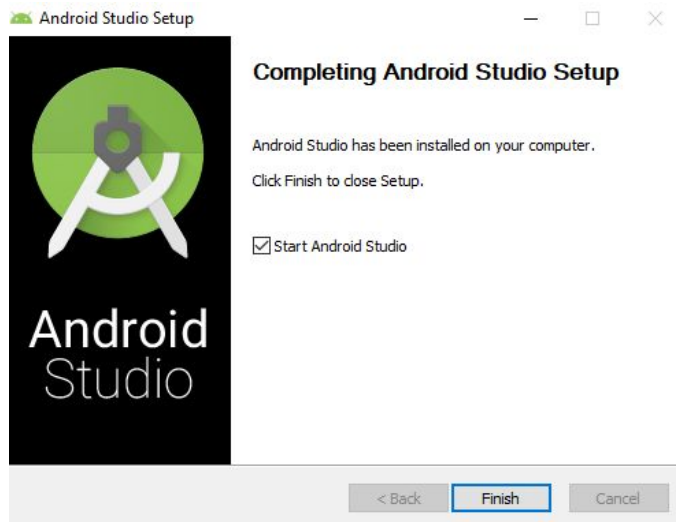

Open **android-studio-ide-193.6514223-windows.exe** when the download is completed.

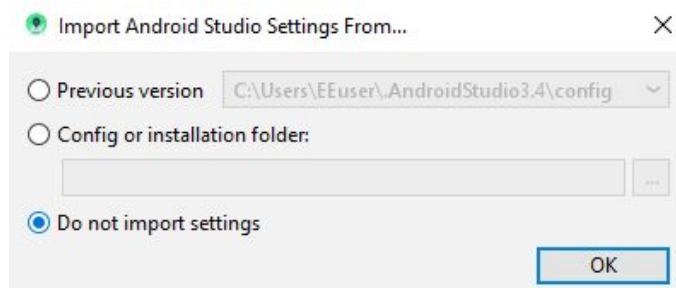

3. Click “Next” → “Next” → “Next” → “Install” → “Next”.

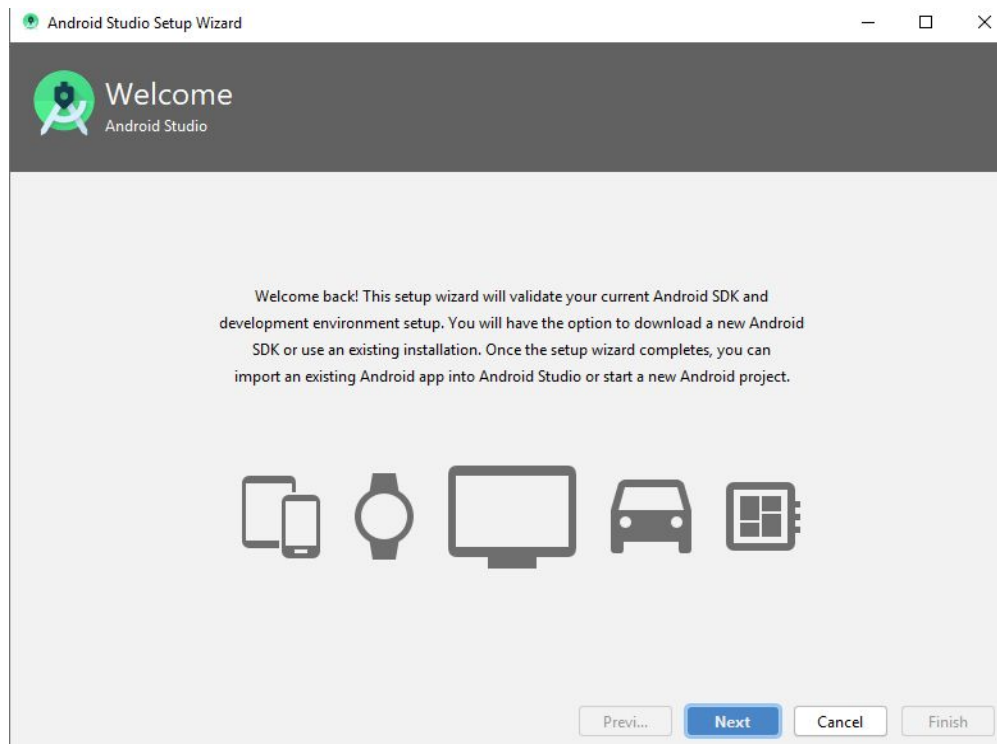

“Finish”.

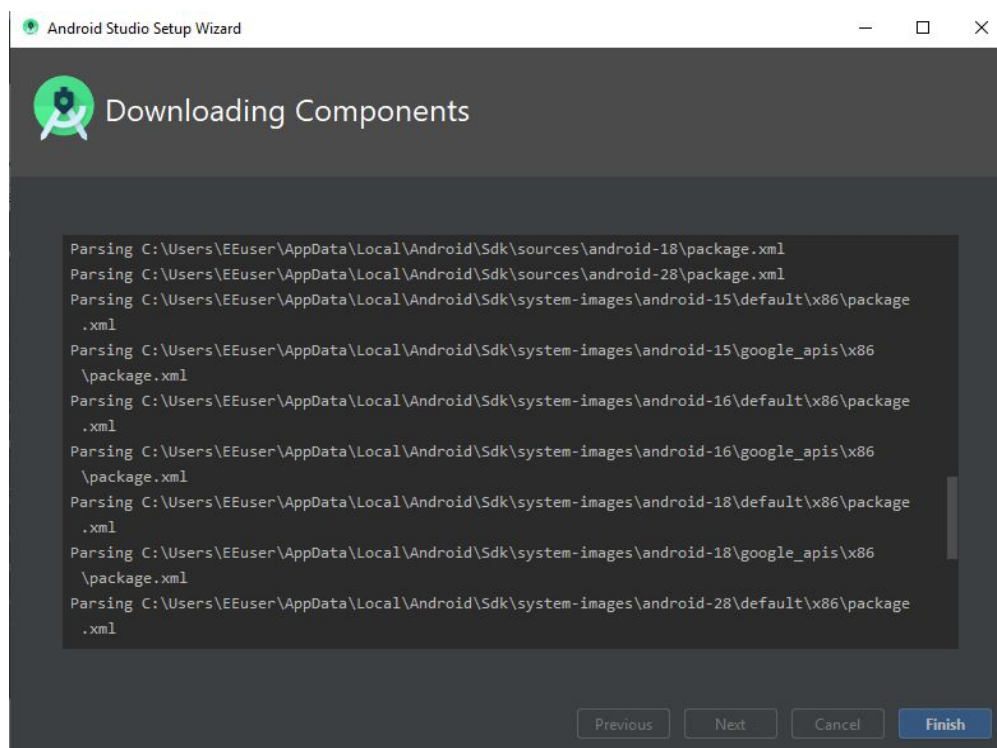

Select “Do not import settings” → “OK”.

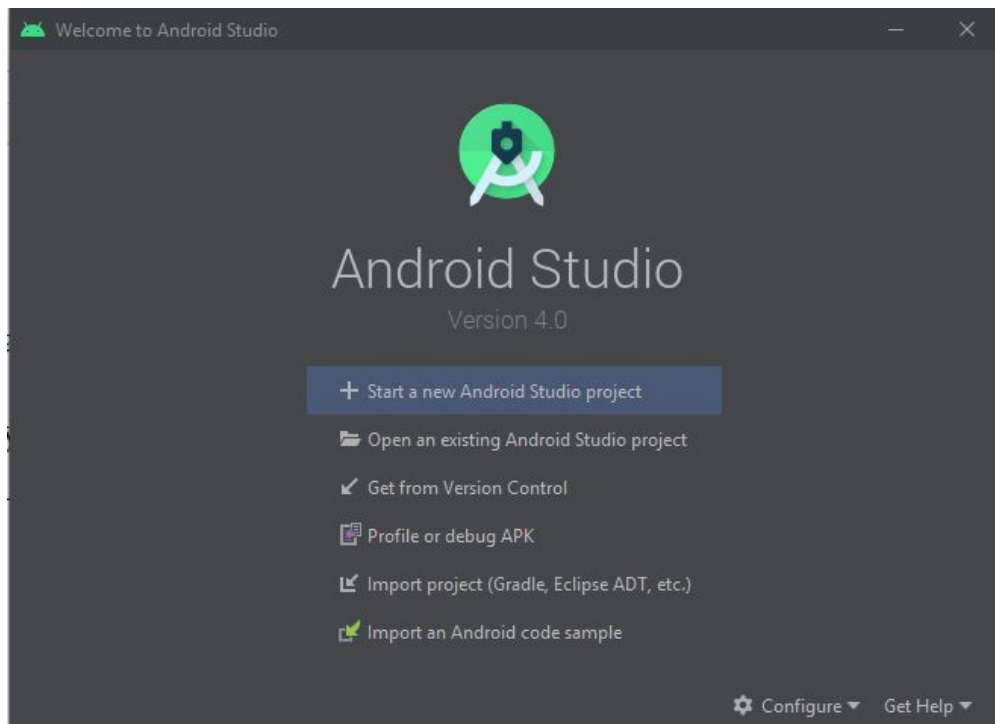

“Next” → Select “Standard” → “Next” → Select a theme → “Next” → “Finish”.

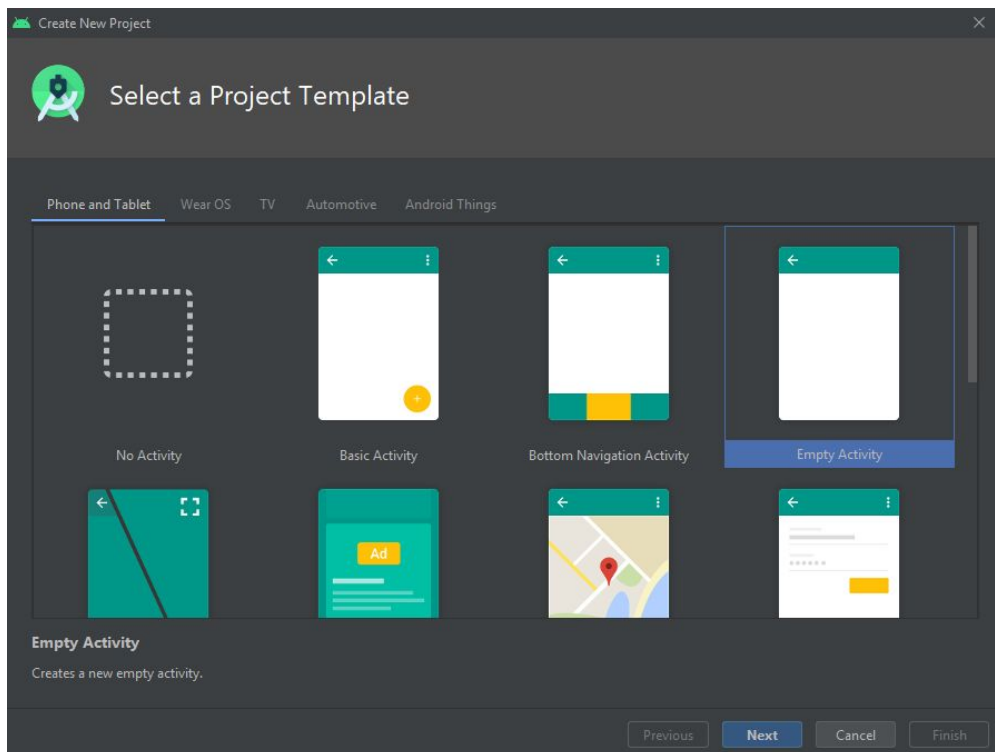

“Finish”.

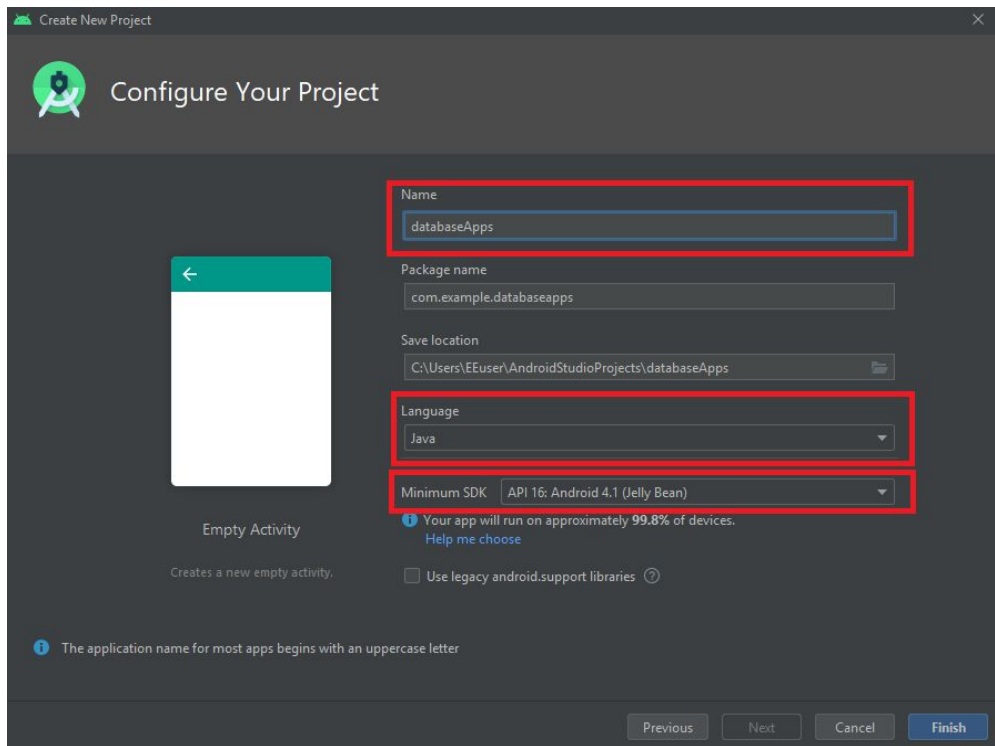

4. Select **“Start a new Android Studio project”**.

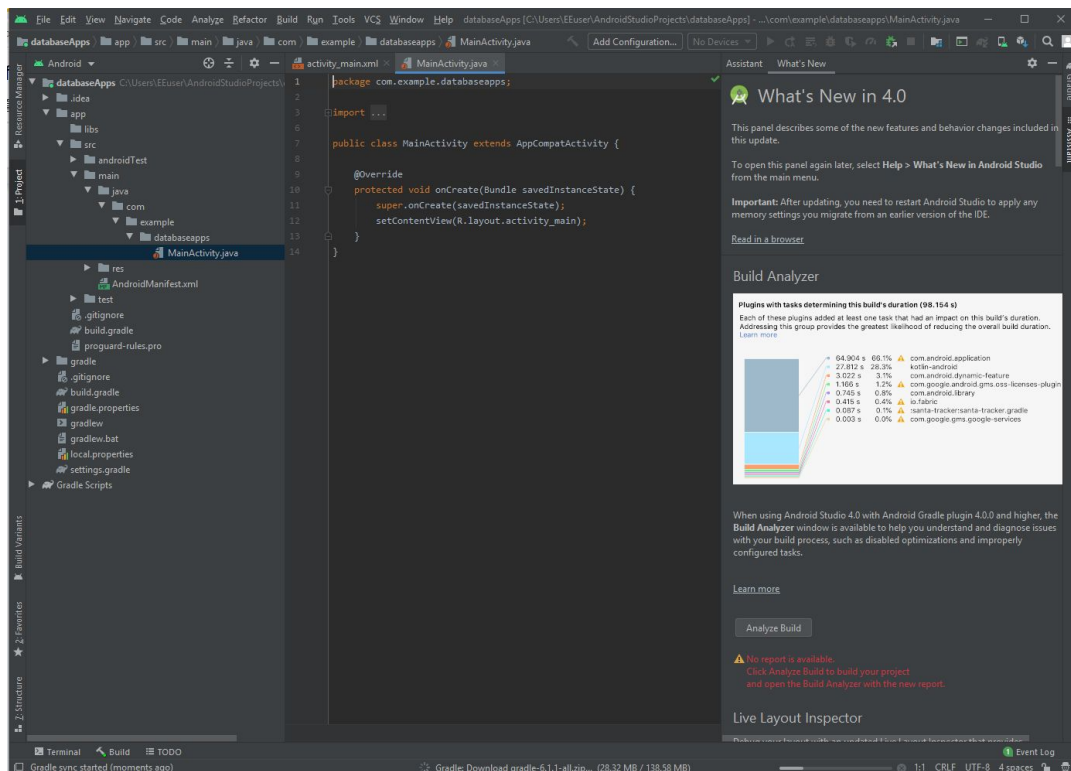

**“Empty Activity”** → **“Next”**.

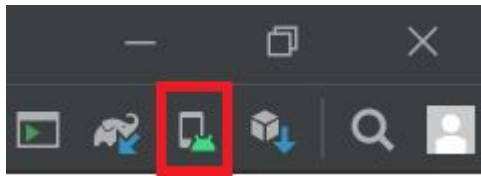

Name your project **“databaseApps”** → select **“Java”** under **“Language”** → make sure **“Minimum SDK”** is **“API 16:Android 4.1 (Jelly Bean)”** → **“Finish”**.

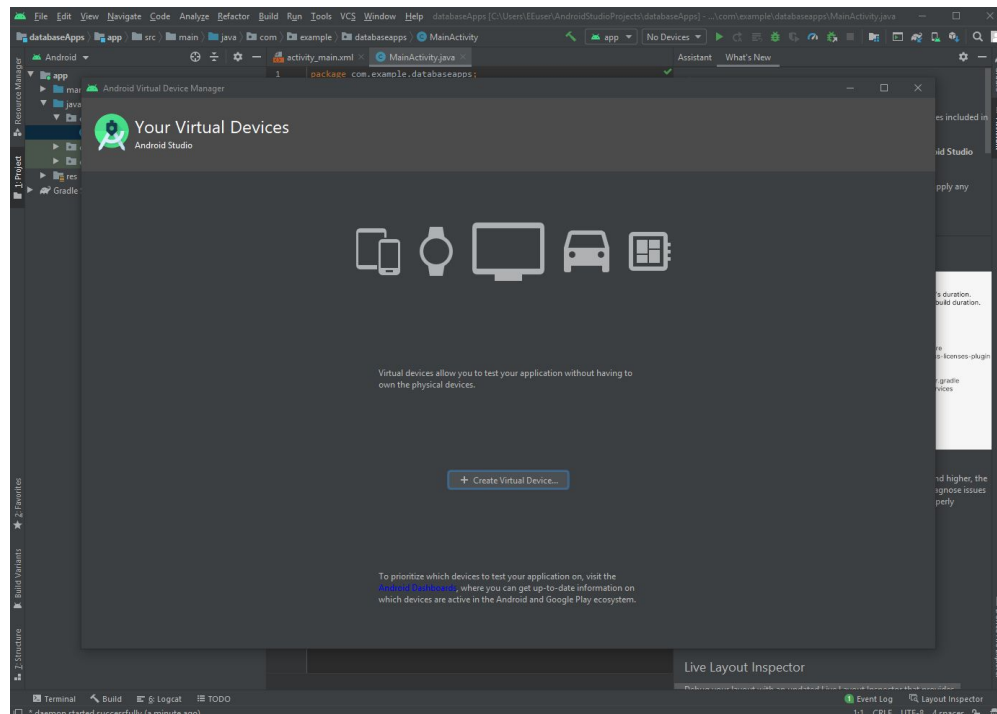

You should be able to see the following:

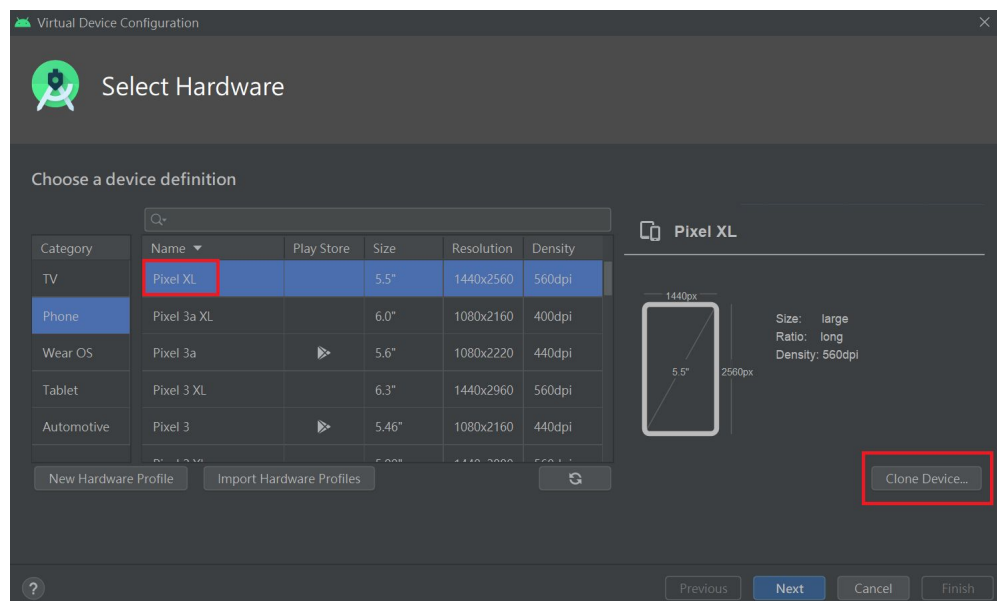

5. To create a Virtual Device. Click the **AVD manager icon** in the top right corner.

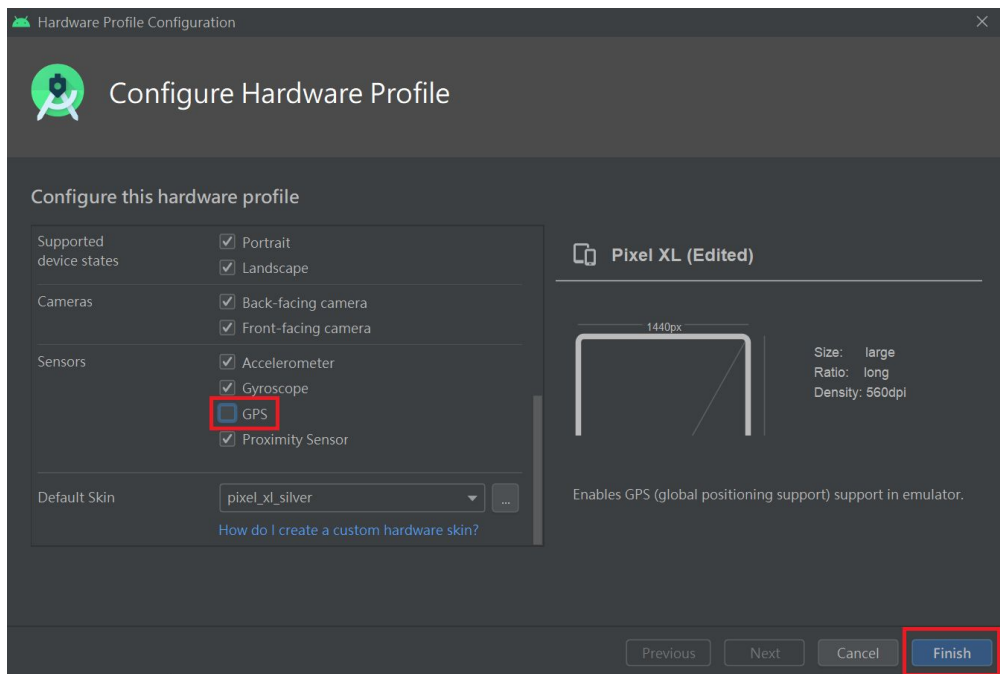

Click “**Create Virtual Device...**”.

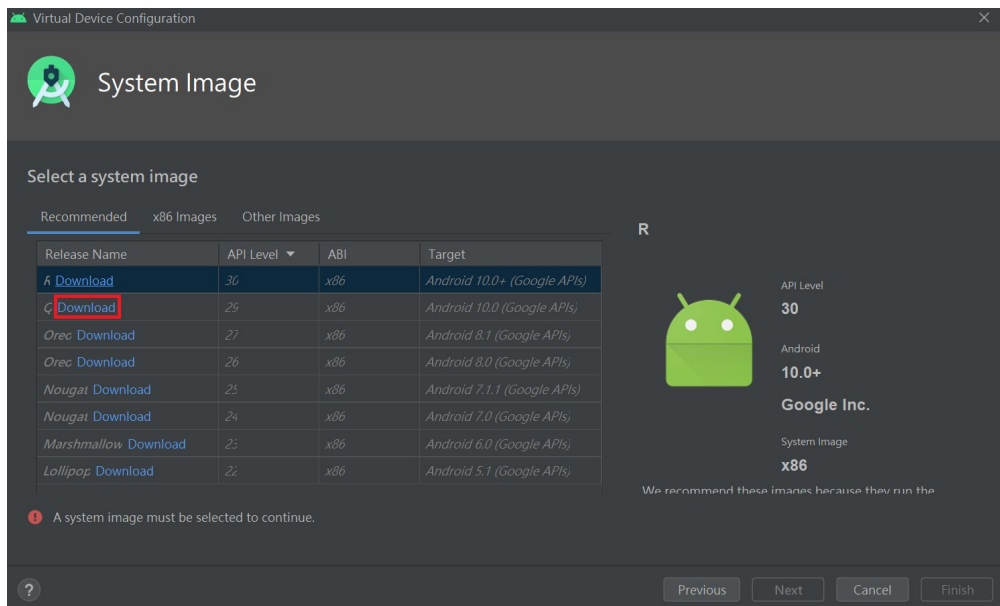

Select “**Pixel XL**” → click “**Clone Device...**” in the bottom right corner.

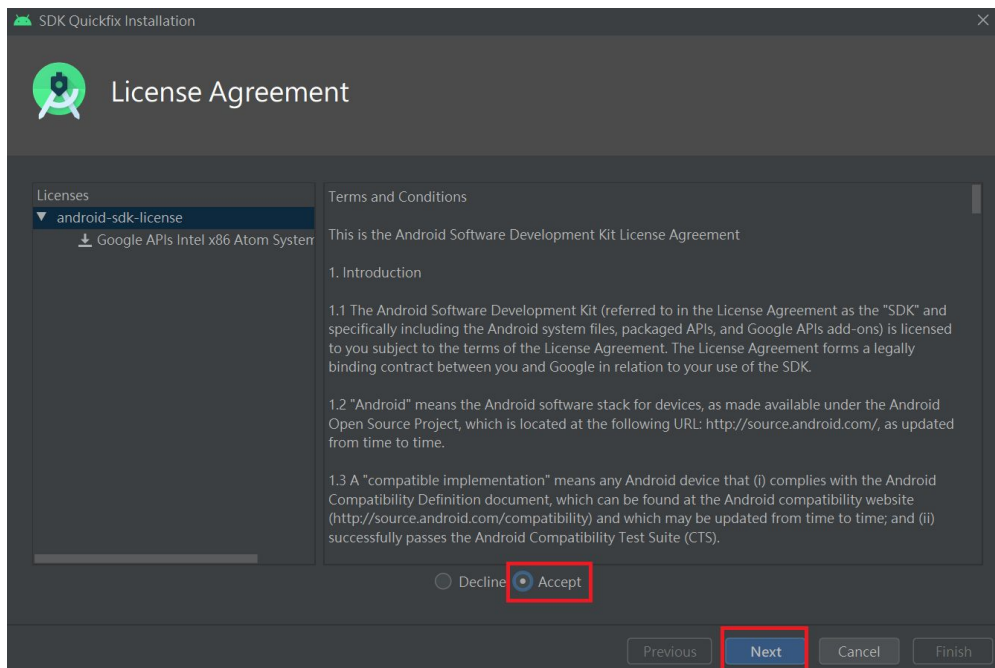

Disable “GPS” → “Finish”.

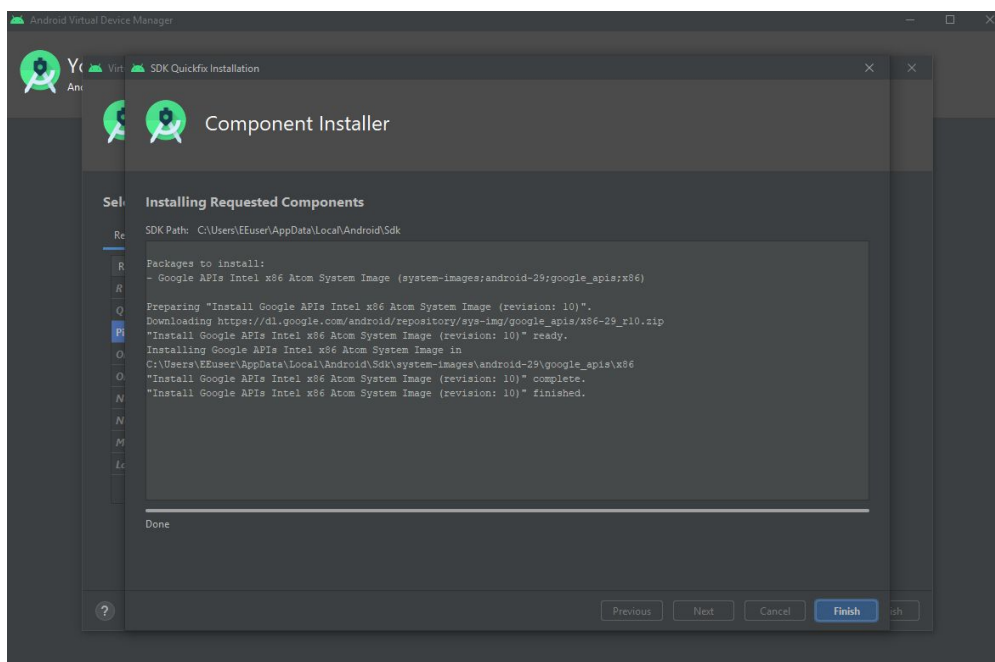

“Next” → click the “Download” beside “Q”.

Select “Accept” → “Next”.

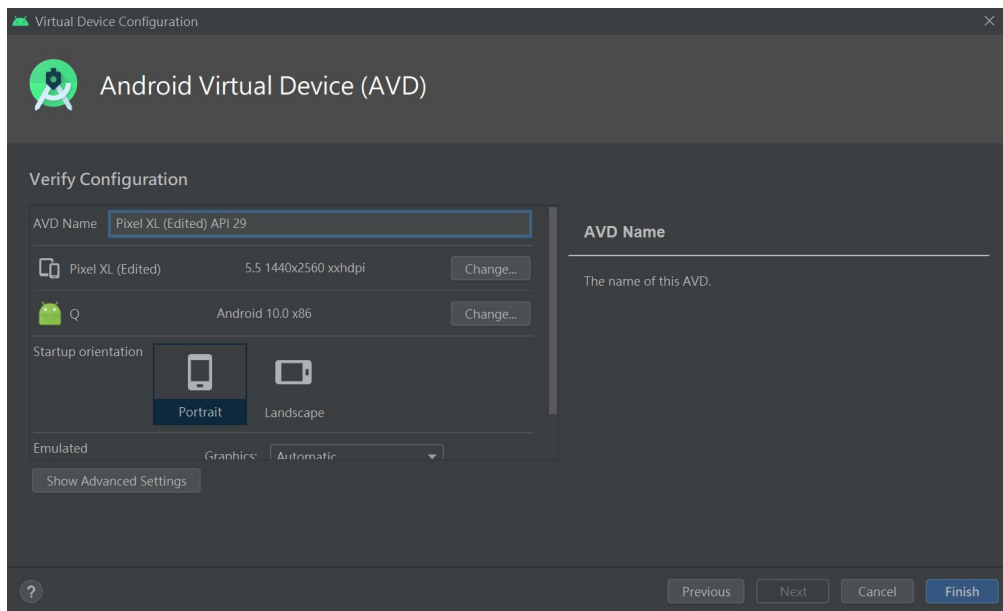

“Finish”.

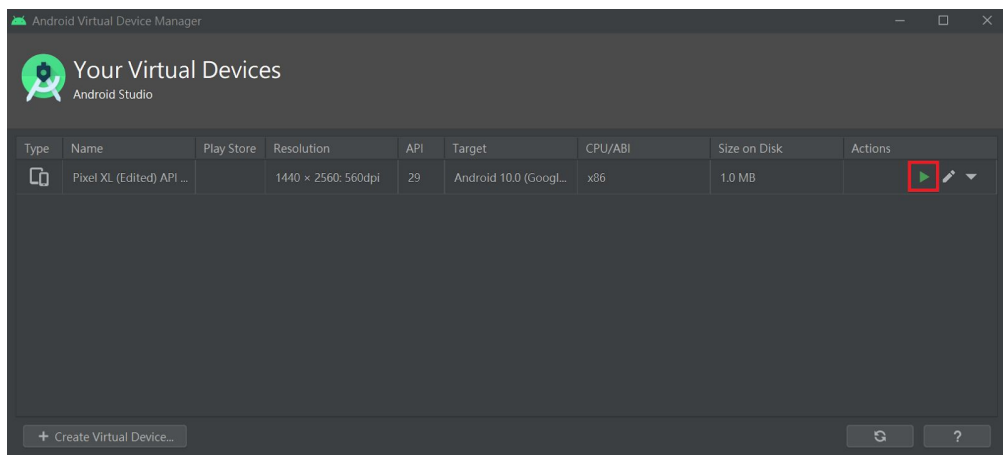

“Next” → “Finish”.

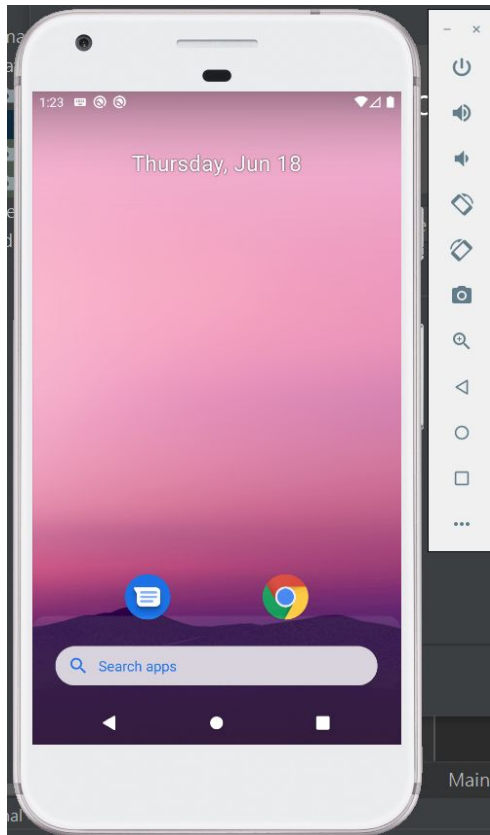

You should be able to see the following:

Click **Launch this AVD in the emulator icon** under “Action” column.

You should be able to see the following:

6. Now, you can start writing your mobile application.
